

VINDICARA • PROJECT AIR™ • PRE-SEED

Forensic reconstruction and incident response for AI agents.

Project AIR is the OSS SDK developers install in five minutes, and the signed Intent Capsule chain that produces evidence SOC, legal, and insurance can act on.

Agents went to production. The audit layer didn't.

362 AI security incidents in 2025, +55% YoY. AI INCIDENT DATABASE	73% of production AI deployments contain prompt injection. OWASP / LAKERA • 2025	0 evidence-grade audit logs produced by today's agent stack. VINDICARA ANALYSIS • 2026
--	---	---

REAL AGENT INCIDENTS, 2025-2026

EchoLeak M365 Copilot • May 2025	ForcedLeak Salesforce Agentforce • Sep 2025	Replit Vibe Meltdown Jul 2025	Amazon Q Poisoning Jul 2025	Mexico 195M records Dec 2025 – Feb 2026
--	---	---	---	---

Prevention has it. Observability has it. Governance has it. The forensic-evidence layer is empty.

PREVENT Lakera · NeMo · Bedrock Stops bad things before they happen.	OBSERVE LangSmith · Langfuse · Arize · Datadog LLM Shows what happened, for debugging.	GOVERN Credo AI · Fiddler · watsonx.governance Manages policy at the program level.	PROVE Project AIR · the layer this deck is about Produces signed evidence SOC, legal, and insurance can act on.
---	---	--	--

AIR runs behind the prevention, observability, and governance layers, not against them.

When an agent goes off-script, AIR tells you what happened, and proves it.

THREE LINES. ONE CALLBACK.

```
from airsdk import AIRCallbackHandler
from langchain.agents import AgentExecutor
handler = AIRCallbackHandler(

    log_path="my-agent.log",

    user_intent="Process Q3 sales report",

)

agent = AgentExecutor(callbacks=[handler])
```

Six framework integrations: LangChain, OpenAI, Anthropic, LlamaIndex, Google Gemini, Google ADK. Plus every OpenAI-compatible endpoint (NVIDIA NIM, vLLM, Together, Groq, Mistral).

Sign every decision

BLAKE3 content hash, Ed25519 signature, forward-chained. OWASP's Intent Capsule pattern (ASIO1 mitigation #5), at decision-level granularity.

Replay and verify

`air trace my-agent.log` verifies signatures and runs OWASP-aligned detectors.

Export forensic report

JSON for the dev. PDF for legal and insurance. SIEM (ArcSight CEF) for the SOC. One command.

From `pip install` to signed forensic report, in one command.

```
$ pip install projectair
Successfully installed projectair-0.3.2

$ air demo
[AIR v0.3.2] Loaded 47 agent steps across 1 conversation.
[Chain verified] 47 records, Ed25519 signatures valid, BLAKE3 chain intact.

ASI01 Agent Goal Hijack at step 8 admin_delete_records outside declared goal
ASI02 Tool Misuse at step 34 shell_exec with unescaped metacharacters
ASI03 Identity & Privilege Abuse unknown agent ID, registry mismatch
ASI04 Supply Chain at step 6 mcp_analytics invocation, MCP inventory check
ASI05 Unexpected Code Execution python_eval on generated code (critical)
ASI06 Memory Poisoning at step 13 rag_retrieve returned injection-shaped content
ASI07 Inter-Agent Communication A2A descriptor forgery, signer-key mismatch
ASI08 Cascading Failures at step 46 alpha fanned out to 5 distinct agents
ASI09 Human-Agent Trust at step 17 fabricated authority before wire_transfer
ASI10 Rogue Agents at step 22 tool outside declared behavioral scope
AIR-01 / AIR-02 / AIR-03 / AIR-04 LLM01 / LLM06 / LLM04 / chain-integrity

```

10 of 10 OWASP Agentic detectors plus 3 OWASP LLM plus 1 AIR-native, surfaced in the first run.

Five things that did not exist 12 months ago.

DEC 2025 OWASP Top 10 for Agentic Applications v12.6 First formal taxonomy. ASI01–ASI10. The framework AIR maps to 1:1.	JAN 2026 Armilla closes \$25M Series B AI liability insurance with explicit coverage for agent failures. The buyer for AIR's evidence.	MAR 2026 Public AgDR signed-decision spec BLAKE3, Ed25519, forward-chained hash chain. AIR's on-disk format is compatible.	APR 2026 OWASP names "Intent Capsule" ASI01 mitigation #5. Exactly what AIR ships at decision-level granularity.	AUG 2, 2026 EU AI Act Article 72 enforcement begins High-risk AI requires post-market monitoring with audit trails. €15M / 3% global turnover penalties.
---	--	--	--	--

Where the security spend is going.

\$3–5B AI security TAM in 2026. \$15–35B by 2028, 35% CAGR. INDUSTRY ANALYST CONSENSUS		\$500M – \$5B Agent IR sub-segment. Specifically addressable for the forensic-evidence layer. VINDICARA SIZING
\$32B Google announced acquisition of Wiz (Mar 2025). Largest cybersecurity deal on record.	\$28B Cisco acquired Splunk (closed Mar 2024). Audit and SIEM consolidation at scale.	\$25M Armilla Series B (Jan 2026). AI insurance market is funded, looking for evidence inputs.

Pricing benchmark: \$30K–\$300K ACV enterprise security tools, \$15K–\$50K mid-market.

Verified on PyPI. Not promises, code.

PROJECTAIR • MIT • V0.3.2

The OSS developer surface. `pip install projectair`.

- **10 of 10 OWASP Agentic detectors** (ASIO1 through ASIO10)
- **3 OWASP LLM detectors** (LLM01, LLM04, LLM06) plus **1 AIR-native** chain-integrity check
- BLAKE3 + Ed25519 Signed Intent Capsule chain (AgDR-format compatible)
- Six framework integrations: LangChain, OpenAI, Anthropic, LlamaIndex, Gemini, ADK. Plus OpenAI-compatible endpoints (NVIDIA NIM, vLLM, Together, Groq, Mistral)
- JSON, PDF, SIEM (ArcSight CEF) exports plus EU AI Act Article 72 template

VINDICARA • APACHE-2.0

Engine substrate behind AIR Cloud. Not for direct install.

- FastAPI on AWS Lambda, DynamoDB, S3
- MCP Security Scanner
- Agent IAM (per-agent identities, scoped tokens)
- Behavioral Drift Detection
- Compliance-as-Code (EU AI Act Article 72, NIST AI RMF, SOC 2 AI, ISO 42001)

Snyk-style split: MIT CLI + SDK at the top of the funnel, commercial Pro tier and engine behind the cloud. `mypy --strict`, 80% CI coverage floor. Admissibility whitepaper live at vindicara.io/admissibility.

Concrete milestones. Tied to capital.

MONTH 1 AIR Cloud private alpha. New surfaces shipped. Hosted ingestion + dashboard. CrewAI and AutoGen integrations. A2A protocol capture as a new ASI07-aligned surface.	MONTH 2 Three design partners signed. Series A–C agentic shops with EU customers demanding Article 72 readiness. Active forensic record collection in production.	MONTH 3 First paid pilot live. Insurance partner first call. \$5K–\$15K/mo Cloud pilot. Insurance carrier conversation about underwriting evidence schema. 1,000+ GitHub stars.	MONTH 4 Five paying customers. Seed open. \$25K–\$75K MRR run-rate. Learned-baseline ASI10 variant shipped. Full ASI04 supply-chain detector beyond MCP naming patterns.
--	---	---	--

Free tool lands. Paid engine expands.

The Snyk OSS-to-enterprise playbook, retuned for agent IR.

WEDGE One ICP. Real urgency. Security engineer at a Series A–C agentic shop with at least one EU customer demanding Article 72 readiness. Reachable through framework communities (LangChain, LlamaIndex, ADK) and AI security working groups.	LAND Free pip install projectair Five-minute install. One callback. Signed Intent Capsule chain producing real forensic reports. The buyer demos it to their EU customer the same afternoon.	EXPAND AIR Cloud, paid engine Individual at \$29/mo (Cloud client + premium reports). Team and Enterprise quoted on workload, deployment model, and compliance scope. Hosted dashboards, SIEM pipelines, premium detectors, insurance-workflow exports.
--	--	---

There is a category. Here is who is in it.

LAYER	WHO	WHAT AIR DOES	THEY DO NOT
Prevention	Lakera (Check Point), NeMo Guardrails, Bedrock Guardrails	Records what they could not stop, signed and admissible.	Produce forensic evidence.
Observability	LangSmith, Langfuse, Arize, Datadog LLM	Signs the trace so it is evidence, not just a log.	Produce evidence.
Forensic claimants	Vorlon, Oktsec, AgDR spec implementations	Framework-native (LangChain / OpenAI / Anthropic / LlamaIndex / Gemini / ADK). MIT OSS wedge. Three-audience export.	Ship a developer OSS wedge.
Insurance	Armillia, Vouch, Munich Re aiSure	Supplies the underwriting evidence those carriers need.	Sit in the agent runtime.

AIR's seat: framework-native, MIT, Intent-Capsule-signed, three-audience export, OWASP-grounded. Still empty.

Solo founder. Shipped six AI products before this one.
Knows regulated-market buyers from 1099Pass.

SLTR DIGITAL • 1099PASS Built fintech live in production. Gig-worker income verification, cleared Plaid's production review. Six AI products shipped under SLTR Digital including Luminetic. Taught me what regulated-market buyers actually want: signed, replayable evidence, not "trust me."	PROJECT AIR VELOCITY v0.1.0 → v0.3.2 in six weeks. 14 production detectors. Six framework integrations. BLAKE3 + Ed25519 signed Intent Capsule chain. EU AI Act Article 72 evidence template generator. Live admissibility whitepaper. Velocity is the moat.	OWASP + STANDARDS Grounded, not vibes. Every claim maps 1:1 to OWASP Top 10 for Agentic Applications v12.6 and the OWASP Solutions Landscape. Stack: Python 3.13, AWS Lambda + CDK, BLAKE3 + Ed25519, FastAPI, SvelteKit. mypy -strict clean.
--	---	--

THE ASK

\$500K SAFE at \$5M cap.
12 months to design-partner revenue.

PRODUCT AIR Cloud + framework expansion. Hosted ingestion + dashboard out of private alpha. Learned-baseline ASI10 variant. Full ASI04 supply-chain detector. CrewAI, AutoGen, A2A capture.	REVENUE Five paying customers + insurance partnership. \$25K–\$100K ACV mid-market through framework communities. First insurance-workflow JSON Schema. Insurance carrier as distribution moat.	TEAM First engineer plus cybersecurity advisor. Senior engineer to take AIR Cloud plus the learned-baseline detector in parallel. CISO-title advisor to pressure-test messaging against real buyer scrutiny.
