

VINDICARA • PRE-SEED • APRIL 2026

Forensic reconstruction and incident response for AI agents.

Project AIR is the OSS SDK developers install in five minutes, and the signed Intent Capsule chain that produces evidence SOC, legal, and insurance can act on.

Agents went to production. The audit layer didn't.

362 AI security incidents in 2025, +55% YoY AI INCIDENT DATABASE	73% of production AI deployments contain prompt injection OWASP / LAKERA • 2025	0 evidence-grade audit logs produced by today's agent stack VINDICARA ANALYSIS • 2026
---	--	--

REAL AGENT INCIDENTS, 2025-2026

EchoLeak M365 Copilot • May 2025	ForcedLeak Salesforce Agentforce • Sep 2025	Replit Vibe Meltdown Jul 2025	Amazon Q Poisoning Jul 2025	Mexico 195M records Dec 2025 – Feb 2026
--	---	---	---	---

Prevention has it. Observability has it. Governance has it. The forensic-evidence layer is empty.

PREVENT Lakera · NeMo · Bedrock Stops bad things before they happen.	OBSERVE LangSmith · Langfuse · Arize · Datadog LLM Shows what happened, for debugging.	GOVERN Credo AI · Fiddler · watsonx.governance Manages policy at the program level.	PROVE AIR · the layer this deck is about Produces signed evidence SOC, legal, and insurance can act on.
---	---	--	--

AIR runs behind the prevention, observability, and governance layers, not against them.

When an agent goes off-script, AIR tells you what happened, and proves it.

THREE LINES. ONE CALLBACK.

```
from airds import AIRCallbackHandler
from langchain.agents import AgentExecutor
handler = AIRCallbackHandler(

    log_path="my-agent.log",
    user_intent="Process Q3 sales report",
)

agent = AgentExecutor(callbacks=[handler])
```

Also ships first-party `instrument_openai()` and `instrument_anthropic()`.

Sign every decision

BLAKE3 content hash, Ed25519 signature, chained.
OWASP's Intent Capsule pattern (ASI01 mitigation #5).

Replay and verify

`air trace my-agent.log` verifies signatures and
runs OWASP-aligned detectors.

Export forensic report

JSON for the dev. PDF for legal and insurance. SIEM
(ArcSight CEF) for the SOC. One command.

From `pip install` to signed forensic report, in one command.

```
$ pip install projectair
Successfully installed projectair-0.2.4

$ air demo
[AIR v0.2.4] Loaded 47 agent steps across 1 conversation.
[Chain verified] 47 records, Ed25519 signatures valid, BLAKE3 chain intact.

ASI01 Agent Goal Hijack at step 8 admin_delete_records outside declared goal
ASI02 Tool Misuse at step 34 shell_exec with unescaped metacharacters
ASI04 Supply Chain at step 6 mcp_analytics invocation, MCP inventory check
ASI05 Unexpected Code Execution python_eval on generated code (critical)
ASI06 Memory Poisoning at step 13 rag_retrieve returned injection-shaped content
ASI07 Inter-Agent Communication A2A descriptor forgery, signer-key mismatch
ASI08 Cascading Failures at step 46 alpha fanned out to 5 distinct agents
ASI09 Human-Agent Trust at step 17 fabricated authority before wire_transfer
AIR-01 / AIR-02 / AIR-03 / AIR-04 LLM01 / LLM06 / LLM04 / chain-integrity

[Export] forensic-report.json • --format pdf • --format siem
```

8 of 10 OWASP Agentic detectors plus 3 OWASP LLM plus 1 AIR-native, surfaced in the first run.

Five things that did not exist 12 months ago.

DEC 2025 OWASP Top 10 for Agentic Applications v12.6 First formal taxonomy. ASI01–ASI10. The framework AIR maps to 1:1.	JAN 2026 Armilla closes \$25M Series B AI liability insurance with explicit coverage for agent failures. The buyer for AIR's evidence.	MAR 2026 Public AgDR signed-decision spec BLAKE3, Ed25519, Merkle-tree chaining. AIR's on-disk format is compatible.	APR 2026 OWASP names "Intent Capsule" ASI01 mitigation #5. Exactly what AIR ships at decision-level granularity.	AUG 2, 2026 EU AI Act Article 72 enforcement begins High-risk AI requires post-market monitoring with audit trails. €15M / 3% global turnover penalties.
---	--	--	--	--

Where the security spend is going.

\$3–5B AI security TAM in 2026. \$15–35B by 2028, 35% CAGR. INDUSTRY ANALYST CONSENSUS		\$500M – \$5B Agent IR sub-segment. Specifically addressable for the forensic-evidence layer. VINDICARA SIZING
\$25M Armillia Series B (Jan 2026). AI insurance market is funded.	\$300M Check Point acquired Lakera (Sep 2025). Adjacent-layer consolidation.	\$18B Salesforce acquired Wiz (Apr 2026). Enterprise security spend at scale.

Pricing benchmark: \$30K–\$300K ACV enterprise security tools, \$15K–\$50K mid-market.

Verified on PyPI. No promises, code.

PROJECTAIR • MIT • V0.2.4

The OSS developer surface. `pip install projectair`.

- **8 OWASP Agentic detectors** (ASI01, ASI02, ASI04 partial, ASI05, ASI06, ASI07, ASI08, ASI09)
- **3 OWASP LLM detectors** (AIR-01 → LLM01 Prompt Injection, AIR-02 → LLM06 Sensitive Data, AIR-03 → LLM04 DoS)
- **1 AIR-native detector** (AIR-04 Untraceable Action, chain integrity)
- LangChain callback + OpenAI SDK + Anthropic SDK first-party integrations
- BLAKE3 + Ed25519 Signed Intent Capsule chain (AgDR-format compatible)
- JSON, PDF, and SIEM (ArcSight CEF) exports from

VINDICARA • APACHE-2.0 • V0.2.0

Engine substrate behind AIR Cloud. Not for direct install.

- FastAPI on AWS Lambda, DynamoDB, S3
- MCP Security Scanner
- Agent IAM (per-agent identities, scoped tokens)
- Behavioral Drift Detection
- Compliance-as-Code (EU AI Act Article 72, NIST AI RMF, SOC 2 AI, ISO 42001)

Concrete milestones. Tied to capital.

WEEK 1 10 of 10 OWASP Agentic shipped ASI03 Identity & Privilege Abuse (agent-identity registry design plus detector). ASI10 Rogue Agents (behavioral-integrity baselines). OWASP Q3 Solutions Landscape submission live.	WEEK 4 AIR Cloud private alpha Hosted dashboard, SIEM pipeline, /playground page. EchoLeak case-study blog (HN + LangChain Discord). 3 design partner LOIs in EU + US.	WEEK 8 First paid pilot. 500 GitHub stars. \$5K–\$15K/mo pilot live with one design partner. Armilla insurance partnership first call. OWASP contributor status on the ASI initiative.	WEEK 12 \$40K–\$75K MRR run-rate. Seed open. 90-second demo video (real exploit, real export). 5 paying customers. Seed conversations with the believer-filter narrative.
---	--	--	---

Free tool lands. Paid engine expands.

The Snyk OSS-to-enterprise playbook, retuned for agent IR.

WEDGE One ICP. Real urgency. Security engineer at a Series A–C LangChain shop with at least one EU customer demanding Article 72 readiness. ~500–1,200 reachable buyers through LangChain Discord and company directories.	LAND Free pip install projectair Five-minute install. One callback. Signed Intent Capsule chain producing real forensic reports. The buyer demos it to their EU customer the same afternoon.	EXPAND AIR Cloud, paid engine \$49 Dev, \$149 Team self-serve. Enterprise ACV \$25K–\$100K. Hosted dashboards, SIEM pipelines, premium detectors, compliance evidence at scale, insurance-workflow exports.
--	--	---

There is a category. Here is who is in it.

LAYER	WHO	WHAT AIR DOES	THEY DO NOT
Prevention	Lakera (Check Point), NeMo Guardrails, Bedrock Guardrails	Records what they could not stop, signed and admissible.	Produce forensic evidence.
Observability	LangSmith, Langfuse, Arize, Datadog LLM	Signs the trace so it is evidence, not just a log.	Produce evidence.
Forensic claimants	Vorlon (RSA Mar 2026), Oktsec (Apr 2026), AgDR spec	LangChain / OpenAI / Anthropic - native. MIT OSS wedge. Three - audience export.	Ship a developer OSS wedge.
Insurance	Armillar, Vouch, Munich Re aiSure	Supplies the underwriting evidence those carriers need.	Sit in the agent runtime.

AIR's seat: LangChain-native, MIT, Intent-Capsule-signed, three-audience export. Still empty.

Solo founder. Shipped 9 PyPI releases in two days.
Knows regulated-market buyers from 1099Pass.

1099PASS • PLAID REVIEW Built fintech live in production. Gig-worker income verification, cleared Plaid's production review. Taught me what regulated-market buyers actually want: signed, replayable evidence, not "trust me."	PROJECTAIR VELOCITY v0.1.0 → v0.2.4 in two days. 9 PyPI releases April 20–21, 2026. 8 OWASP Agentic detectors, 3 OWASP LLM detectors, 1 AIR-native check. LangChain, OpenAI SDK, Anthropic SDK integrations. BLAKE3 + Ed25519 signed Intent Capsule chain. Velocity is the moat.	OWASP + STANDARDS Grounded, not vibes. Every claim maps 1:1 to OWASP Top 10 for Agentic Applications v12.6 and the Solutions Landscape framework. Engaging Scott Clinton's project directly. Stack: Python 3.12, AWS Lambda + CDK, BLAKE3 + Ed25519, LangChain / OpenAI / Anthropic.
--	---	---

THE ASK

\$500K SAFE at \$5M cap.
12 months to design partner revenue.

PRODUCT Ship the remaining 2 OWASP Agentic detectors. ASI03 Identity & Privilege Abuse (needs agent-identity registry, v0.3.0). ASI10 Rogue Agents (behavioral-integrity baselines). Reach 10 of 10 by Month 2.	REVENUE Land 5 paying customers plus Armilla partnership. \$25K–\$100K ACV mid-market through the LangChain ecosystem. First insurance-workflow JSON Schema. Insurance carrier as distribution moat.	TEAM First engineer plus cybersecurity advisor. Senior engineer to take AIR Cloud plus ASI03 and ASI10 in parallel. CISO-title advisor to pressure-test messaging against real buyer scrutiny.
